

Skiers triggered this avalanche in dense trees while ascending Mt. Ellis. From the email: "While subsequently skiing up through dense trees climbing to the north to attempt to reach the mid section of the going-home chute, a medium-size bowl-shaped opening in the trees released a soft slab just as we were entering the opening. The crown was ~24" deep and ~80-100' across. Total snow depth in that area was less than three feet. The avalanche ran probably 500 vertical feet down a shallow gully. Neither my partner nor I where caught but way too close for comfort."

Advisory Region

Northern Gallatin Longitude -110.95W Latitude 45.58N **Avalanche Details:** <u>Skier Triggered Avalanche Mt. Ellis</u> **Forecast link:** <u>GNFAC Avalanche Forecast for Mon Jan 28, 2019GNFAC Avalanche Forecast for Wed Jan 30, 2019</u> Northern Gallatin, 2019-01-27
