Longitude
-110.97000
Notes

1. From an email: The wind sure moved snow around up Hyalite last night, and our party observed several small to medium-sized releases that occurred on a heavily-loaded east [aspect](#) overnight. None stepped down in the snowpack, but they certainly could have taken a person for a ride. Overall, [stability](#) seemed to be good, with the exception of isolated wind-loaded areas.

2. From IG: Couple of small natural wind slabs around 10,200' NE in Hyalite. Not sure exactly how recent. Played it conservative and chose to stay off a similar slope.
