

N of Peters Point, adjacent to Bridger Bowl boundary

Date

Sat, 02/27/2021 - 11:15

Activity

Skiing

Observed a small avalanche while teaching a rec. 1 today for MSU. Great experience for students. The light was too flat to see a crown. Based on the light wind, ski patrol obs. and our moving obs., I hypothesize that it was a dry, loose avalanche. L-N-R1-D1.5-I. Many of the students got to see it throw up a nice powder cloud! Other noteworthy observations would be Hsn-240cm on E facing slope at 8175' no propagation in our instability tests.

Region

Bridger Range

Location (from list)

BRIDGER RANGE

Observer Name

Andrew Newman
