

Cooke City, SW aspect, 9700 ft.

Date

Tue, 01/04/2022 - 13:30

Activity

Skiing

Felt snowpack collapse under the weight of snowmobile on low angle slope. Dug a pit while touring up SW aspect at 9700 ft, results ECTN 12. Snowpack depth around 4.5 ft, incomplete propagation occurred beneath a wind slap at 14" depth. High winds were transporting snow fast enough to fill in sections skin track by the time we descended. Low angle skiing was great.

Region

Cooke City

Location (from list)

Henderson Mountain

Observer Name

Connor Daly
