Activity

Skiing

I did a loop out to Blaze Mountain via Beehive today, and don't have a whole lot to report. I observed a few small, old sloughs and an east-facing cornice that failed lower down in Beehive, but none of them produced much. There is a noticeable wind crust at the surface in most places, which made the ski conditions humbling. I did get a couple new wind pillows to break and move somewhat forcefully while walking near the summit of Blaze, in an area with a very shallow snowpack. These were sitting on top of some large, old facets, and while they were relatively small, they definitely could have knocked me down in more consequential terrain.

Region

Northern Madison

Observer Name

Sam Reinsel
