

Stable snow in Maid of the Mist

Date

Sat, 03/05/2022 - 11:35

Activity

Snowboarding

Some spots of dry loose activity on east facing slopes where the melt freeze crust was bullet proof. Higher in the basin the crust wasn't as thick but still supported our weight. No propagation in our tests. ECTN 13 15cm below surface with 10cm of new snow and Q3 shear quality on shovel shear test and compression test. Skied fat maid

Other than that lots of old activity from wet loose and one broken cornice from Arden Peak.

Region

Northern Gallatin

Location (from list)

Maid of the Mist

Observer Name

Scott
