Avalanche on Saddle Peak

Saddle Peak Bridger Range 2/10/2024 Code L-N-R1-D1-S Latitude 45.79430 Longitude -110.93600 Notes

From obs: "Witnessed a natural <u>slide/sluff</u> today day off the top of 1/4 Saddle around 3:30 pm from the Bitterend. Visibility was poor could not see the starting point. The <u>slide</u> produced a large dust cloud running down the right side of the Football field, which would could have taken a person for a ride. The <u>slide</u> ran over the cliffs skiers left of Lundy's Luge. The debris covered all the tracks the from the high traverse across the Cueball. Probably would not have buried a person, but certainly would have rocked your world."

Number of slides 1

Number caught

0

Number buried

0

Avalanche Type

Loose-snow avalanche

Trigger

Natural trigger

R size

1

D size

1

Bed Surface

S - Avalanche released within new snow

Problem Type

Loose Dry

Snow Observation Source

Avalanche

Slab Thickness units

centimeters

Single / Multiple / Red Flag

Single Avalanche

Advisory Year

23-24
