

## Small wind slabs in Bridgers, Ross Peak

Ross Peak  
Bridger Range  
3/30/2025  
Code  
SS-AS-R1-D1-S  
Elevation  
8500  
Aspect  
NE  
Latitude  
45.85860  
Longitude  
-110.95600  
Notes

Skied the Banana today with 8-12" of new snow that has mostly bonded. The snowpack below the new snow had froze over night and was well consolidated.

Observed a layer of [graupel](#) (3-4mm grains) at the new/old interface on the NE ramp starting at 8600' and clearing up after 8700'. This layer created some reactivity in the storm snow.

Wind slabs <6" had formed on N and NE aspects. We had one small release in the bottom of the [couloir](#) measuring ~10x20' and running ~50'.

Number of slides  
1  
Number caught  
0  
Number buried  
0  
Avalanche Type  
Soft slab avalanche  
Trigger  
Skier  
R size  
1  
D size  
1  
Bed Surface  
S - Avalanche released within new snow  
Problem Type  
Wind Slab  
Slab Thickness  
6.0 inches  
Vertical Fall  
50ft  
Slab Width  
15.00ft
